

You Need

- Two [2] sets of shapes
... each set is an F, a rectangle and a square
- Recording sheet

Your Task

1. Use the F and the rectangle to make a shape with line symmetry.

Now add the square in two different ways so the shape still has line symmetry.

Draw diagrams to show how to do it.

2. There are three more ways to combine the F, the rectangle and the square to make shapes with line symmetry.

Each way uses all three shapes.

Find the three ways and draw diagrams to show how to do each way.

Note: Shapes must join edge to edge with corners touching.
